

While there is more wrong than right with a diagram like this one, it might at least and only hint at some of the relationships between some of the fields. Its 2D-nature, it being static, the sizes, the amount of overlap, and the missing fields and so on are all indications of SEVERE short-comings. But, as ambiguity, approximation, change and uncertainty are part of the AI applications, so too should one learn to tread with care and keep a sharp critical mind, even with better information than this.
